In the Claims:

- 1.(currently amended)      A bottle for dispensing two liquids in a form as a mixture of the two liquids, the bottle comprising two reservoirs, one for each liquid, a ~~nozzle through which the liquids are dispensed from the bottle~~, a separate passageway from each reservoir, each passageway having an opening to the atmosphere at a leading out of the nozzle in use through which a stream of liquid is formed, and a deflector plate arranged between the openings of the two passageways in the nozzle, the deflector plate and projecting from the end of the a-nozzle in a direction substantially parallel to a the direction of flow of the liquid streams exiting from the two passageways and in contact with at least one liquid stream, the openings of the passageways in the nozzle being proximately arranged so that nozzles thereby causing the liquid stream leaving the opening of one passageway is caused to be deflected towards and contact the liquid stream leaving the opening of a second other passageway so that causing the two liquid streams to liquids first mix after the two liquids once they have passed the deflector plate.
- 2.(original)      A bottle according to claim 1, wherein the passageways are arranged in a side-by-side relationship.
- 3.(previously presented)      A bottle according to claim 1, wherein a single deflector plate is arranged to deflect the liquid from both passageways.
- 4.(previously presented)      A bottle according to claim 1, wherein only one passageway is provided with the deflector plate.
- 5.( previously presented)      A bottle according to claim 1, wherein each passageway has its own deflector plate.

US Serial No. 10/565893

- 6.( previously presented)      A bottle according to claim 1, wherein the free end of the deflector plate is tapered in the direction of flow.
- 7.( previously presented)      A bottle according to claim 1, wherein the two passageways are substantially parallel in the nozzle.
- 8.( previously presented)      A bottle according to claim 1, wherein the nozzle is angled in respect to a main axis of the bottle.
- 9.(currently amended)          A bottle according to claim 1, containing two liquids having a viscosity of less than 1000 cps Cps.
- 10.( previously presented)      A bottle according to claim 1 containing two liquids which will mix to form a detergent.
- 11.(canceled)
- 12.(currently amended)          A bottle according to claim 9 containing two liquids having a viscosity of less than 500 cps Cps.
